Project by **Paulus Setyabudi**

Thanks & Regards

For more than three decades, MM Galleri has embarked on a journey that transforms natural stone into expressions of timeless beauty. This evolution would not have been possible without the trust, passion, and creative spirit of our designers and clients. Your belief in our vision has fueled our pursuit of new frontiers, reimagining the very essence of stone as a medium of art and design. Each collaboration — from the spark of an idea to the completion of a project — has been a source of inspiration that continues to guide our path.

To the designers who accompany us, we are grateful for the boldness of your ideas and the courage of your concepts. Your search for beauty and innovation has pushed us to refine our craftsmanship and develop techniques that overcome boundaries once thought immovable. Together, we have given natural stone a voice of limitless expression, where creativity becomes the cornerstone of our shared achievements.

To the clients who entrust us with their spaces, we extend our deepest gratitude. From private residences to destinations of international renown, your projects have become the stage upon which our dedication to design, craftsmanship, and innovation is revealed. Your confidence over these 32 years is the foundation of our story, and we look forward to continuing this dialogue — shaping the language of stone for generations to come.

Founder and Creative Director
Peter S. Tjioe

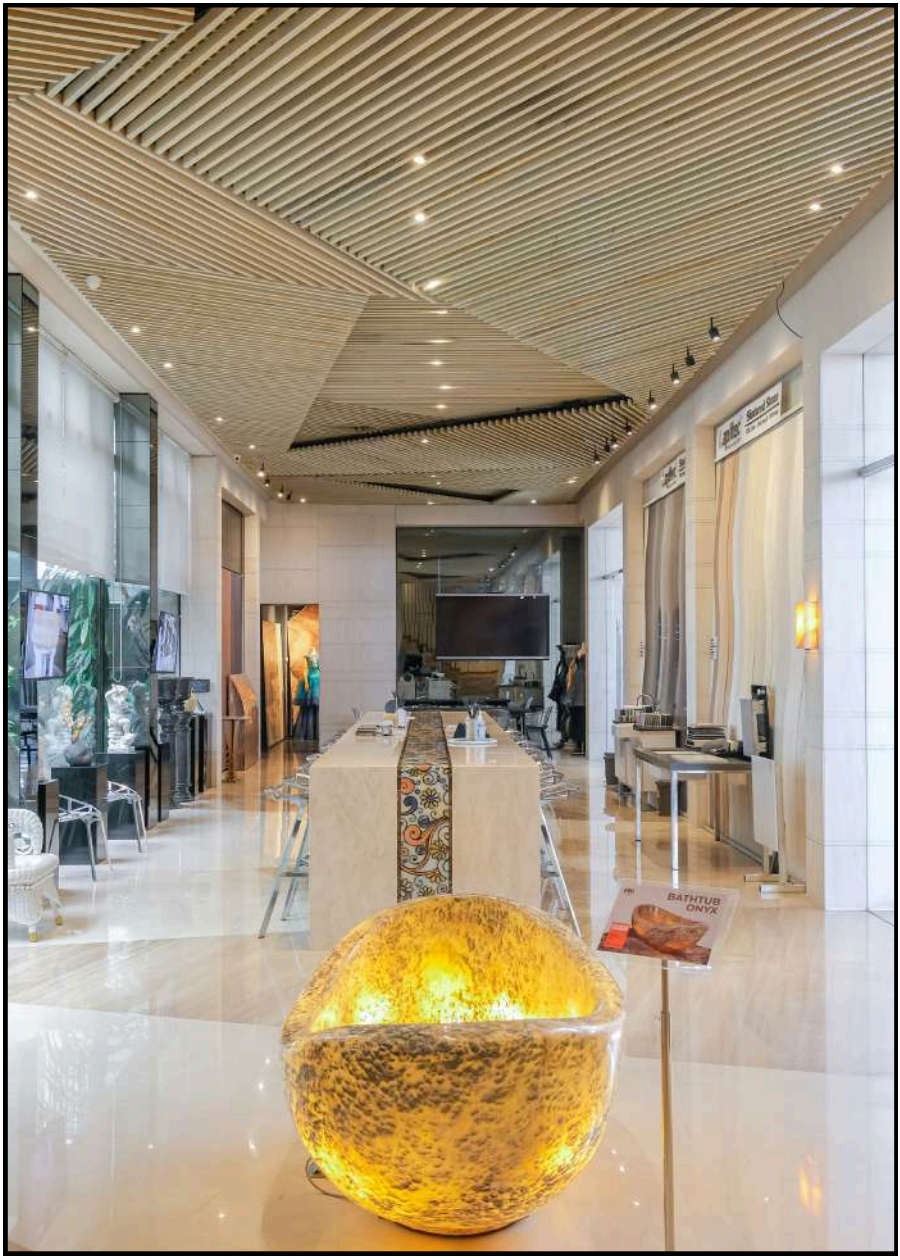

Sustainability & Actions

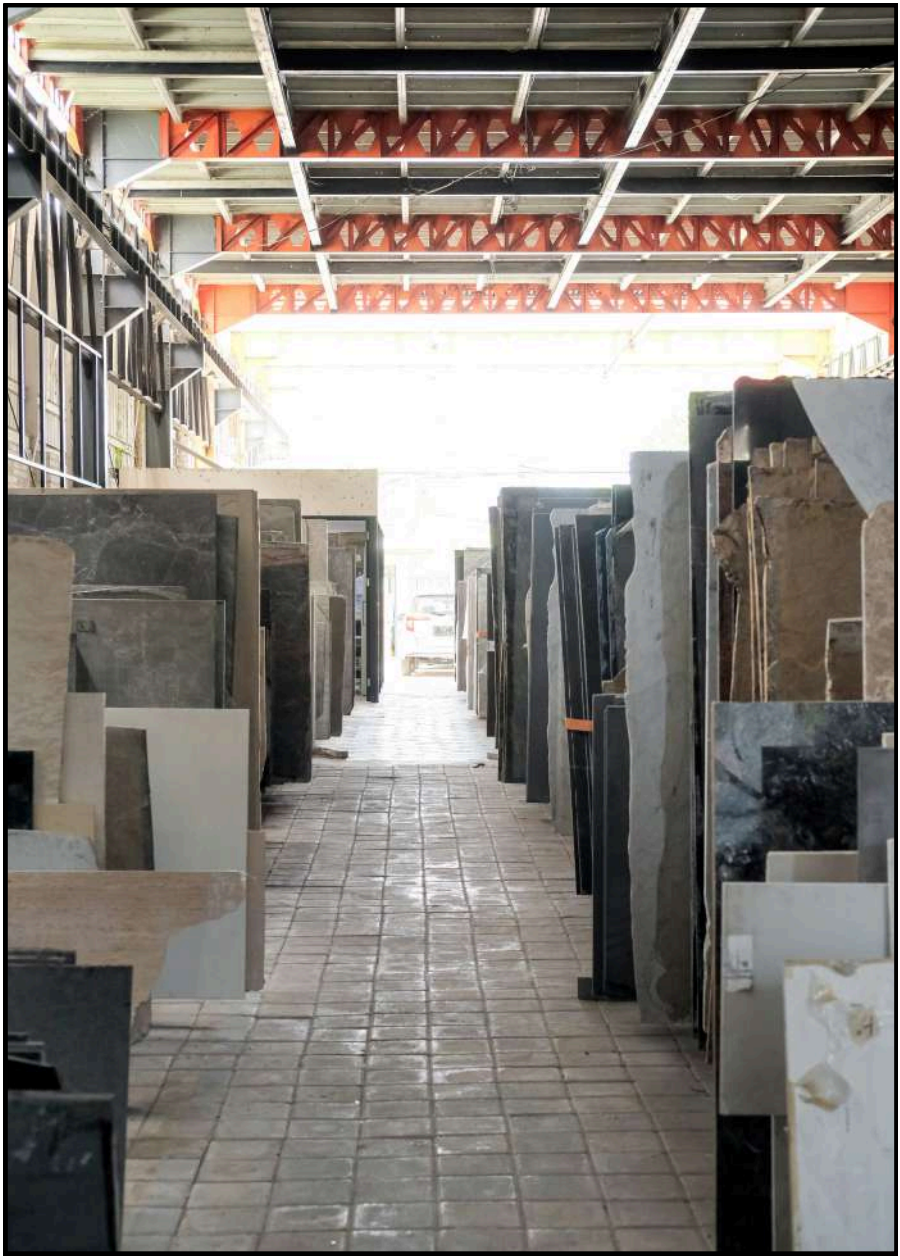

Sustainability has always been central to our philosophy. From the outset, every refinement and innovation has been guided by the responsibility to safeguard natural resources and minimize waste. Natural stone, timeless and enduring, demands a respectful approach — one we have embraced as a defining element of our mission.

Our efforts extend beyond convention. With our in-house recycling treatment center, stone dust is reborn as natural fertilizer for reforestation, while advanced water recycling and energy-efficient systems ensure responsible production. This closed-loop approach reduces impact while protecting the well-being of our communities, earning national recognition for eco-friendly innovation.

Looking ahead, sustainability is not only our identity but our promise. We are advancing the way we mine our quarries with more eco-efficient machinery, reducing reliance on fossil fuels and lowering our environmental impact. At the same time, we remain committed to recycling resin waste and transforming marble dust into a natural fertilizer, giving it new life through reforestation projects. And as we move forward, our innovations and creations will continue to be guided by efficiency in material use and the pursuit of less waste — ensuring that every design reflects both timeless beauty and responsible stewardship for generations to come.

History

Our story began in Surabaya in 1992, where the seeds of MM Galleri first took root. What started as a single vision grew steadily, reaching the shores of Bali in 2003, where the island's spirit of art and culture infused our journey. By 2006, we carried that momentum to Jakarta, placing our craft at the heart of Indonesia's bustling capital. And in 2016, we opened our doors in Singapore — our first international chapter, a gateway to share our passion for stone with the world. In the year 2024, we unveiled our latest and top of the line showroom showcasing all our innovations in Jakarta, PIK 2.

Through 33 years of experience, we have lived alongside stone in all its forms — its beauty, its weight, its challenges. Along the way, we faced problems that demanded not just skill, but imagination and patience to solve. Each obstacle became a teacher, shaping our knowledge and deepening our understanding of the material. And from these lessons grew our most important strength: the ability to innovate, to bend limitations into possibilities, and to approach today's world with creativity rooted in decades of craft.

8MM
SIERRA
BENDED
SILHOUETTE

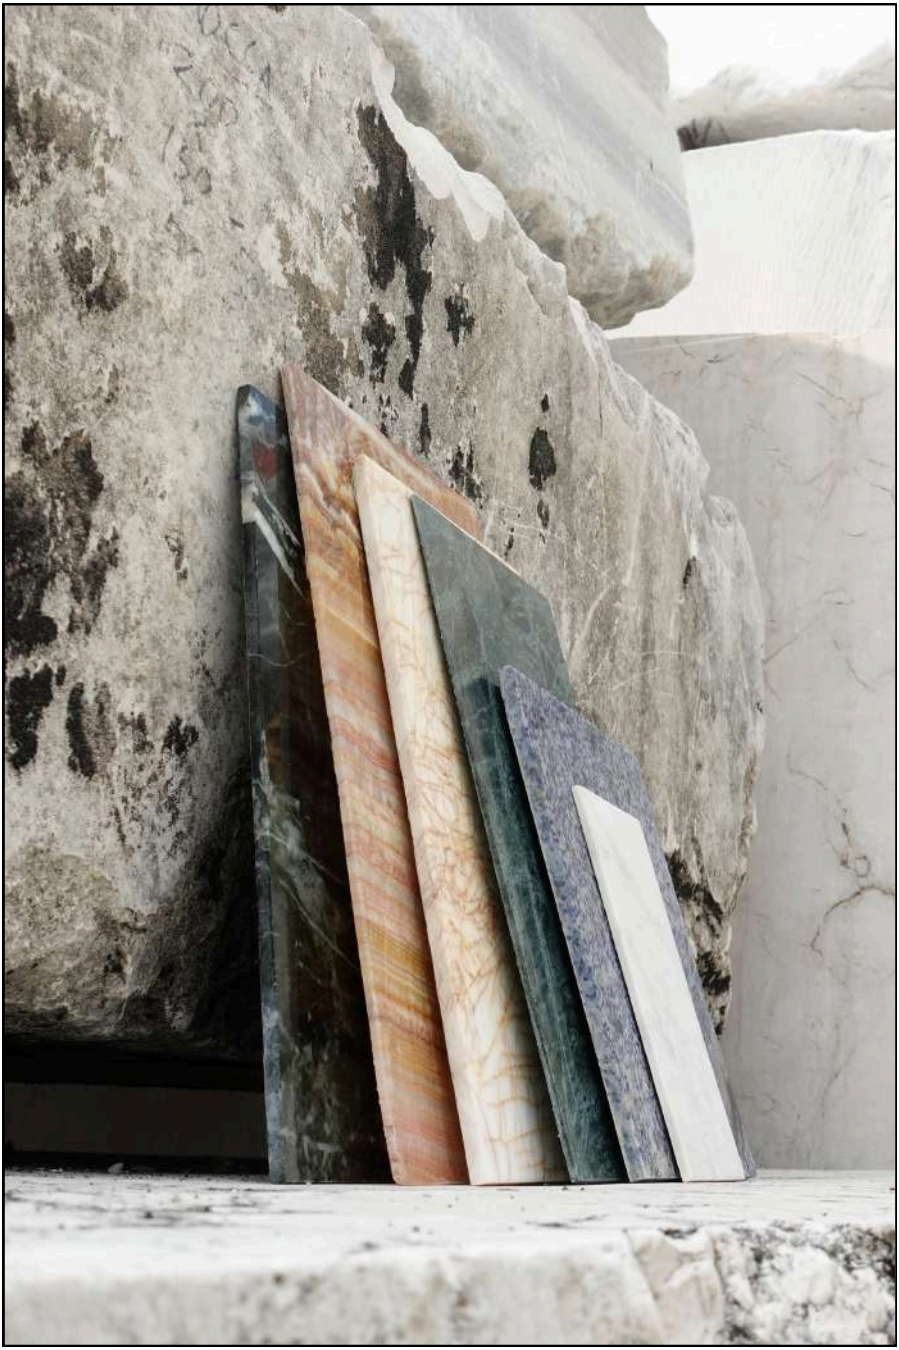

Innovations

8MM stones are challenging thickness itself, by refining slabs to this ultra-thin dimension, marble becomes lighter, more versatile, and ready to clad spaces in ways never thought possible. Strong yet refined, it opens new worlds for architecture and interiors, carrying elegance without weight. And as our innovation advanced, we pushed even further — crafting stone thinner still, and laminating it onto countless surfaces to unlock endless applications and uses.

Sierra was born as an homage to the raw strength of the mountains themselves. Inspired by the jagged ridges of the Sierra range, this technique imitates the natural rhythm of stone shaped by wind, rain, and time. Each surface carries a rugged texture that recalls rocky cliffs and untamed landscapes, yet is refined through craftsmanship to bring that wild beauty indoors. And because every project carries its own vision, the Sierra finish can be tailored — its depth, pattern, and rhythm shaped according to the designer's imagination — turning stone into a canvas where nature and creativity meet.

Bended is an innovation where stone is no longer bound by its natural rigidity. We discovered how to curve and shape marble into fluid forms, transforming it into furniture, walls, and objects that feel alive. What once stood as immovable now flows like a ribbon, expanding the language of design.

Silhouette is our way of turning stone into pure expression. By crafting bespoke 3D art pieces tailored to the vision of each client or designer, we give form to imagination itself. From intricate patterns to bold sculptural statements, any idea can be transformed into stone — timeless, enduring, and uniquely personal.

8MM and Below

In 2002, we stood at the forefront of a breakthrough that reshaped the possibilities of stone. As one of the first to discover and develop thinning technology, we succeeded in creating slabs as thin as 8mm — and, with further refinement, we pushed even lower. What had always been considered heavy and immovable suddenly revealed a new identity: light, versatile, and ready to transcend boundaries.

This innovation gave marble a freedom it had never known. By reducing thickness while preserving strength, stone could be applied in ways once unimaginable — from walls and floors to furniture and delicate design details — offering designers and architects a new palette for exploration.

The discovery kept evolving. Ultra-thin stone could be laminated onto glass, wood, metal, and more, multiplying applications while preserving the elegance of marble. What began with the 8mm split became a gateway to a world of possibilities — proof that innovation can transform a timeless material into something endlessly adaptable.

Sierra

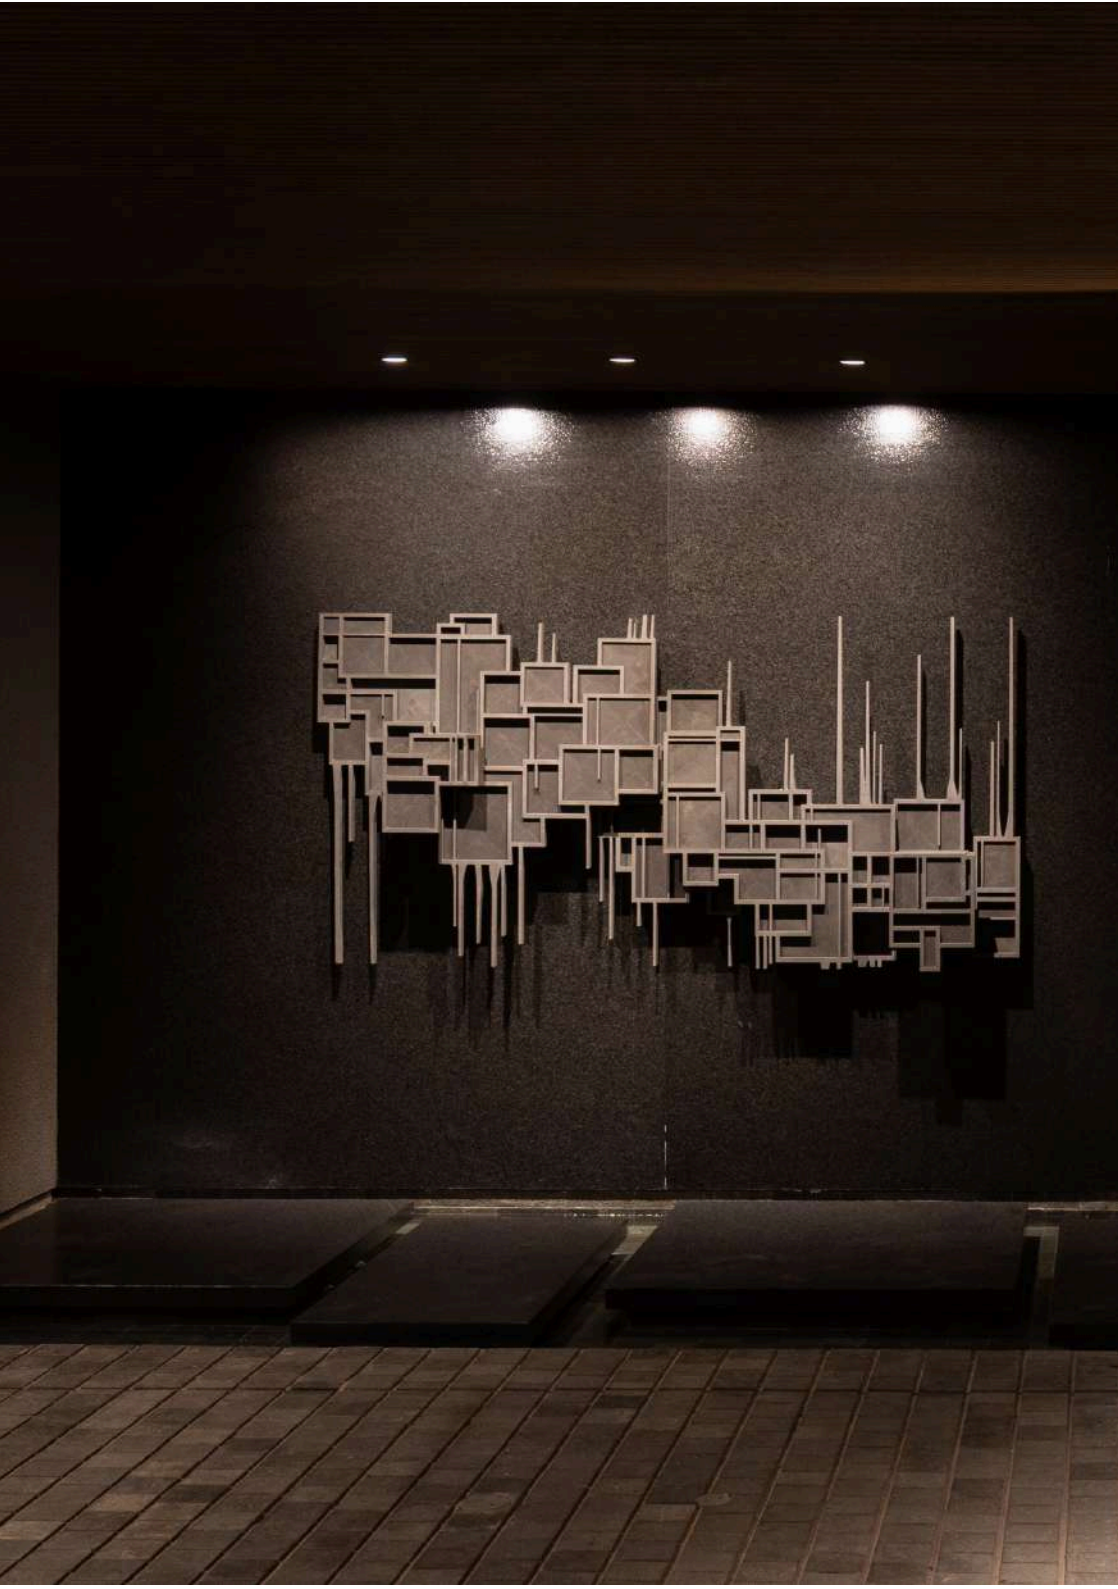

In 2008, Sierra was born from a simple but bold request. A foreign client living in Bali asked if it was possible to create wall claddings shaped by his own design. That question challenged us to look at stone differently — not as something to polish and flatten, but as a surface that could carry rhythm, depth, and movement. From this spark, the Sierra finish emerged.

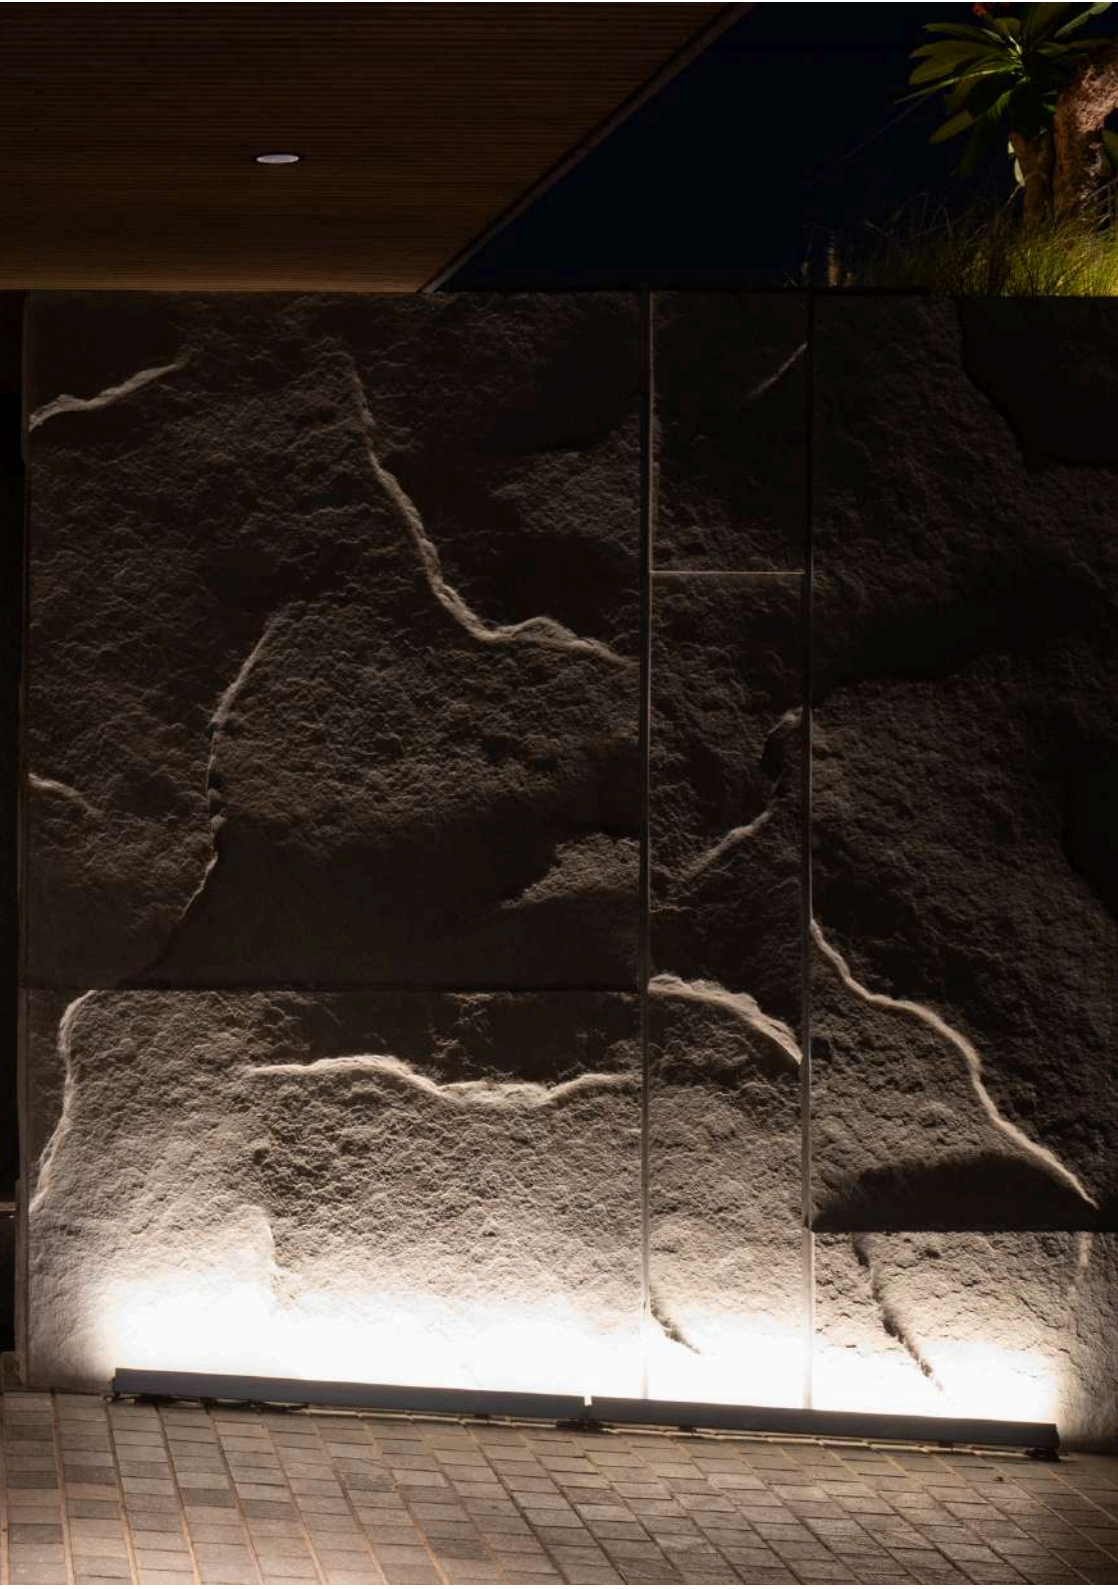

Sierra captures the untamed beauty of the mountains. Its texture recalls the rugged ridges of the Sierra range, shaped by wind, rain, and time. Each finish can be tailored to reflect a designer's vision, with depth and pattern adjusted to create expressions that are either dramatic and bold or subtle and refined. Sierra became more than a finish; it became a dialogue between nature's rawness and human imagination.

It also carries a sustainable spirit. By working with slabs that might otherwise have been discarded, Sierra reduces waste and gives new life to stone considered imperfect. What began as one client's request in Bali has since grown into a hallmark of our innovation — a way to honor nature, embrace creativity, and shape stone into timeless design.

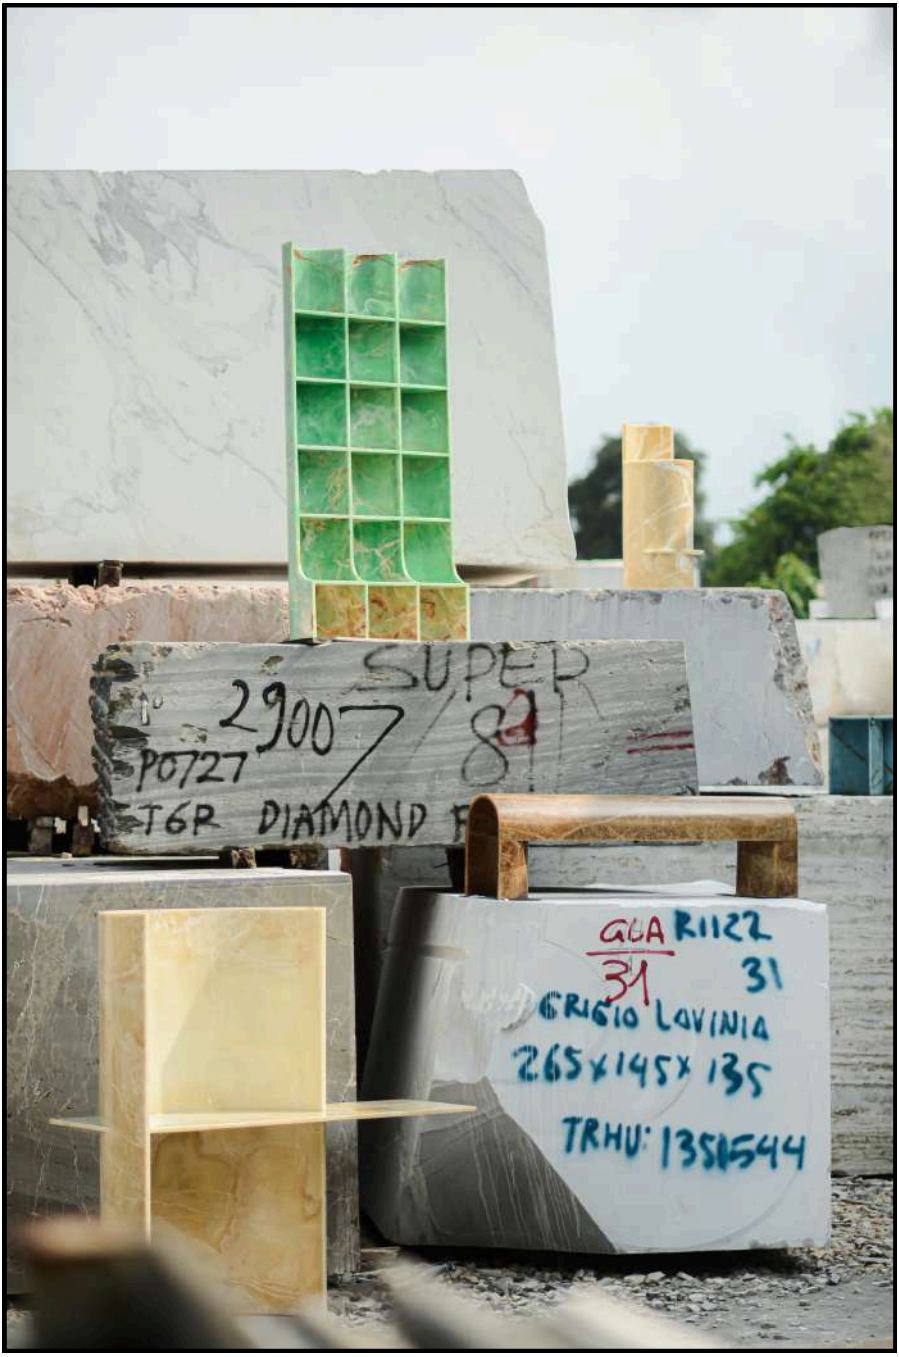

CUSTOM BASED ON DESIGN	ANY NATURAL STONE
40% LIGHTER THAN SOLID STONE	90% EFFICIENCY USAGE OF MATERIAL

Bended

Discovered in the year of 2016, the journey of bending began with curiosity. At first, we explored the possibilities of thinning and splitting stone, reducing its weight while revealing its hidden potential. What seemed like a rigid, immovable material began to suggest flexibility — if only we could understand it more deeply.

Our search for answers led us into technical studies, pouring over resources that taught us the technical grading for strengths of stones, we uncovered that every natural stone, depending on its type, carries its own flexural and bending strength. This knowledge opened a new path: stone was not merely solid and unyielding — it possessed qualities that, with the right approach, could be coaxed into movement.

From there, experimentation became our language. We tested different structures, stone types, and techniques, gradually refining the process until the impossible became reality: bending stone. What once stood only as mass and weight was transformed into fluid form, giving birth to a new expression of natural stone that could curve, flow, and embrace space in ways never imagined before.

REIMAGINING NATURAL STONE'S IDENTITY

Silhouette

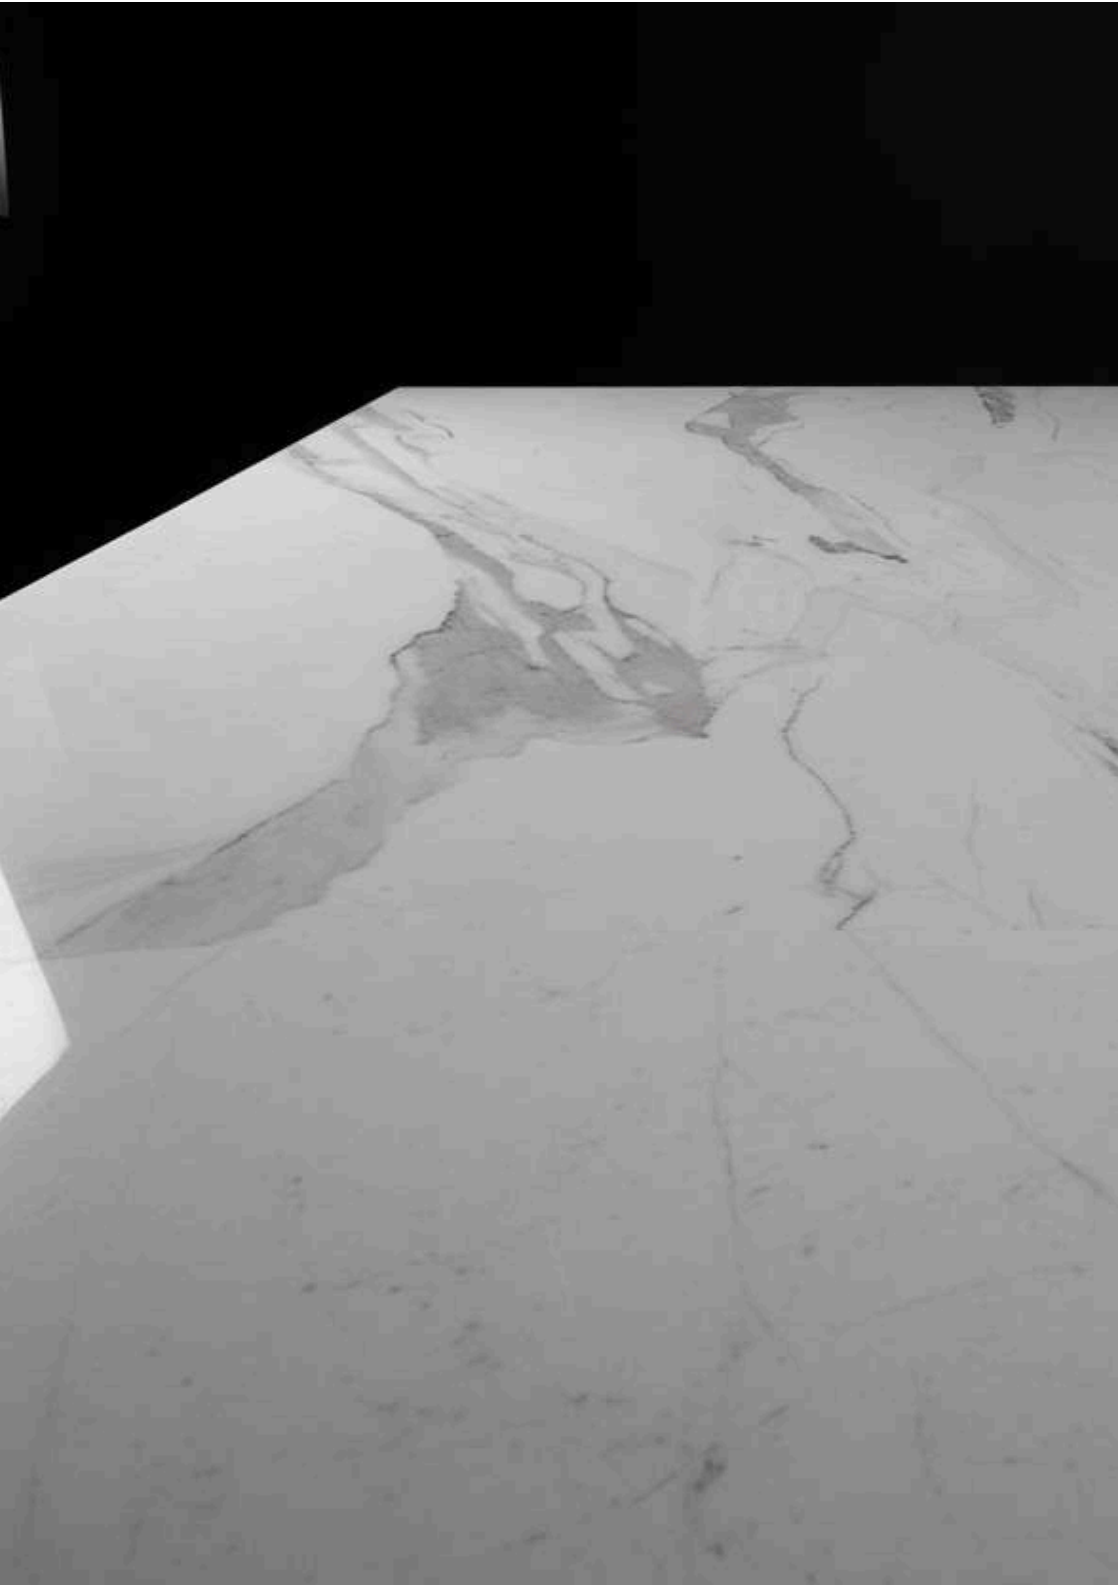

In 2020, we unveiled one of our most defining innovations — Stone Silhouette. After decades of exploring the limits of marble, we asked ourselves how stone could go beyond being a surface or structure, and instead become a medium for pure artistic expression. This question led us to a breakthrough: the ability to craft fully three-dimensional art pieces from stone, shaped entirely by the imagination of designers and clients.

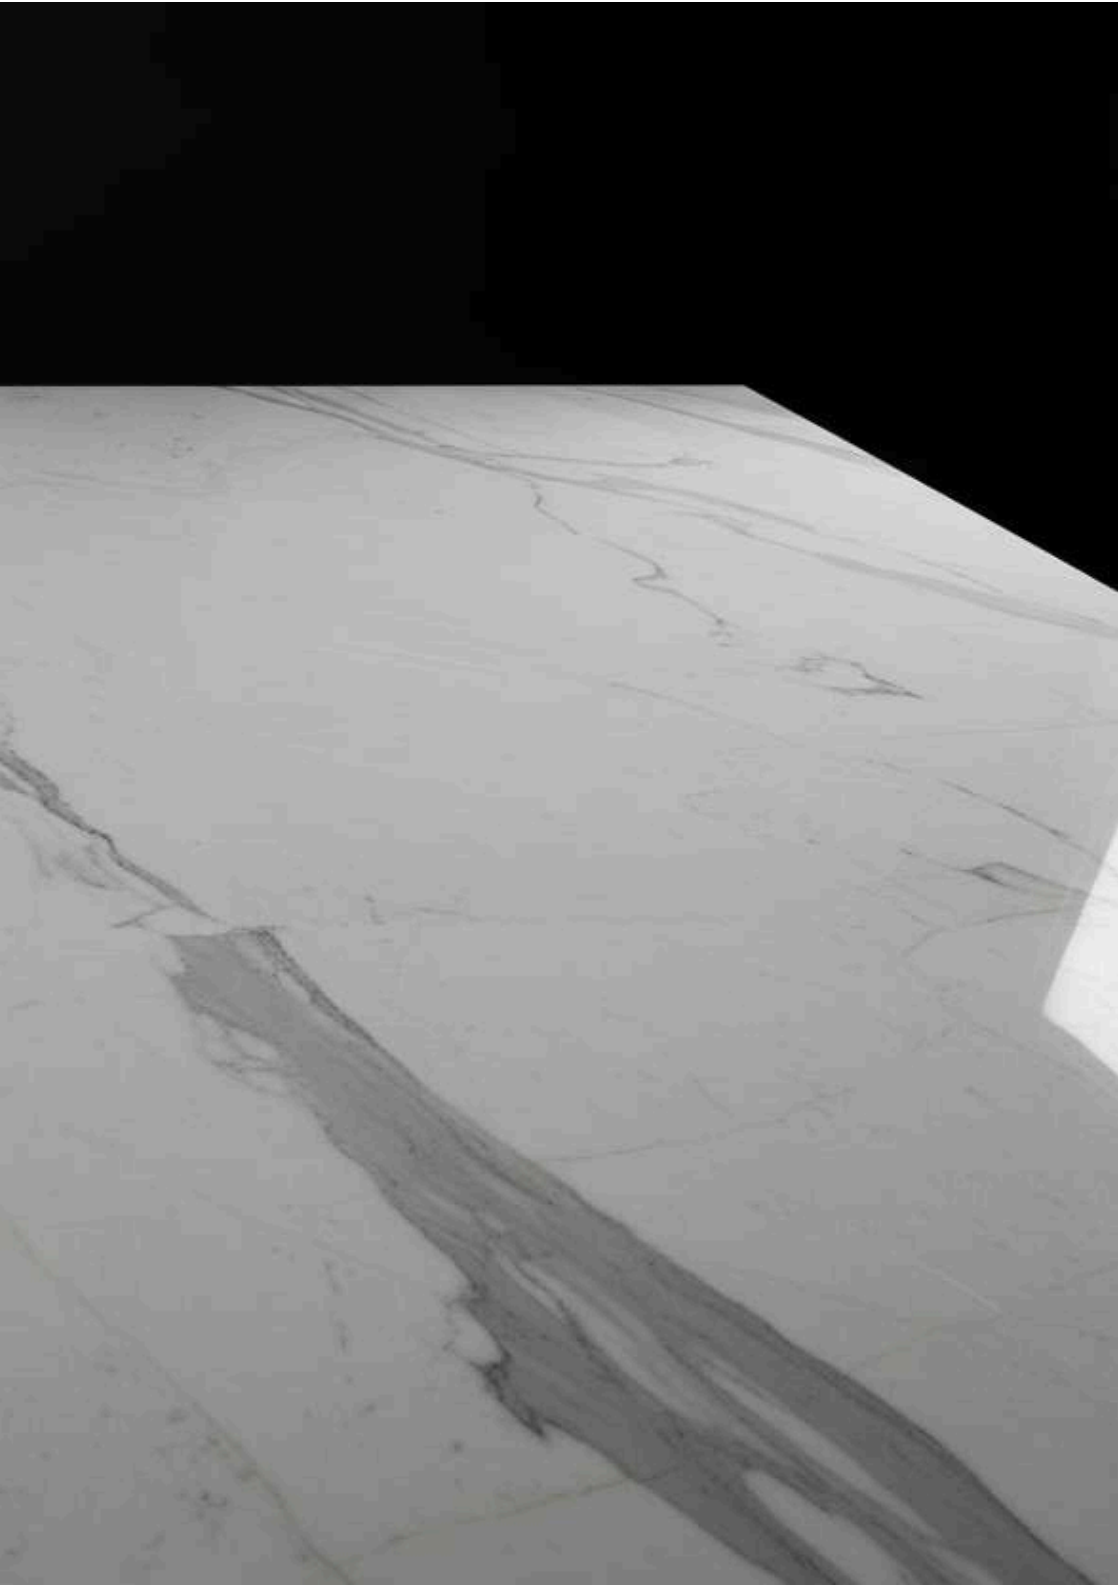

Stone Silhouette gave stone a new voice. For the first time, any design — whether intricate, delicate, or bold — could be translated directly into the timeless medium of natural stone. From sculptures and installations to bespoke architectural features, the technique transformed marble into a canvas of limitless possibility, where personal visions and creative ideas could be preserved in material that endures for generations.

This innovation marked more than just a technical achievement; it reshaped the relationship between stone and design. No longer confined to flat planes or rigid geometry, stone became fluid, versatile, and expressive. With Silhouette, we discovered not only a new technique, but also a new way to honor both creativity and the eternal beauty of stone.

MARBLE	GRANITE
TRAVERTINE	ONYX
QUARTZ	SLATE

Natural Stones

Marble is timeless, admired for its luminous veining and natural elegance. A stone of refinement, it has been cherished for centuries in art and architecture. At MM Galleri, we offer over 400 different types of marble, each with its own character and beauty.

Granite is strength and endurance, formed from volcanic origins and known for its durability. Its speckled patterns bring depth and resilience to any space. We showcase over 100 different types of granite, offering a wide spectrum of colors and textures.

Travertine carries earthy warmth, formed in mineral springs and marked by soft, natural tones. Used since ancient Rome, it brings harmony and history into design. We house 20 different types of travertine, each offering a unique texture.

Onyx is dramatic and luminous, glowing with bands of color when lit from behind. Every slab is a natural artwork, mysterious and luxurious. Our collection includes 35 different types of onyx, each one distinct.

Quartz combines natural beauty with modern performance, resistant to stains and scratches while offering refined consistency. A versatile choice for contemporary spaces, we feature 22 different types of quartz.

Slate speaks through its layered textures and subtle hues of grey, green, and rust. Strong, weather-resistant, and understated, it has timeless appeal. We carry 12 different types of slate, each revealing nature’s quiet sophistication.

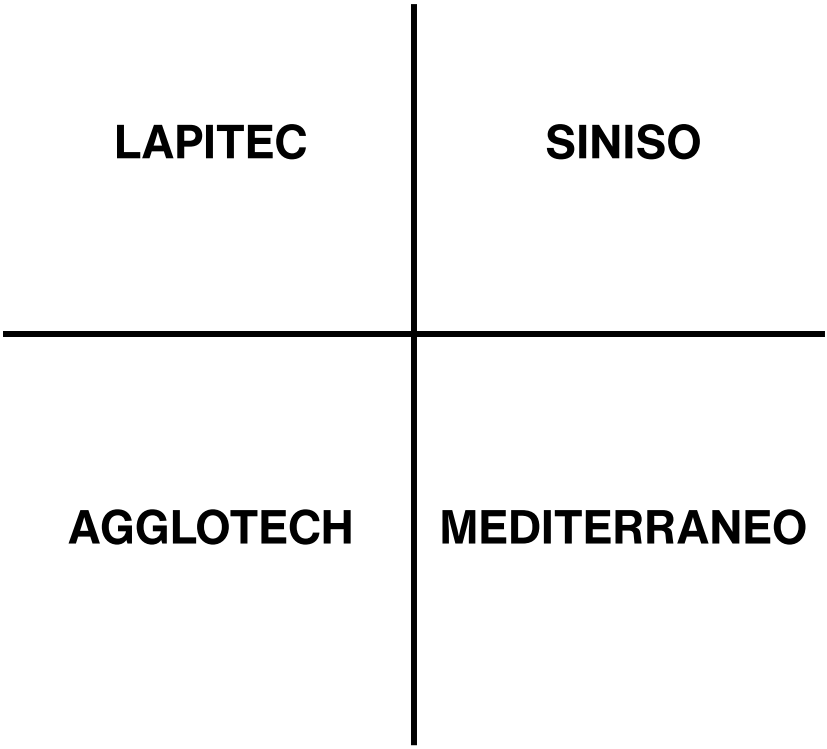

Project by ALIGN Studio

LAPITEC
SINISO
AGGLOTECH
MEDITERRANEO

Engineered Stones

Lapitec is a full-body sintered stone, created through advanced technology that fuses natural minerals into large, versatile slabs. Resistant to heat, UV, and stains, it combines the beauty of stone with durability for both indoor and outdoor use. Its surfaces remain elegant yet strong, making it a favorite for kitchens, facades, and flooring.

Agglotech is a leading Italian manufacturer and the largest producer of architectural terrazzo in Europe. Headquartered in Verona, Italy, the company specializes in transforming traditional "Venetian terrazzo" into a highly durable, sustainable, and contemporary material used worldwide by major luxury brands and architectural firms.

SINISO is a premium sintered stone brand headquartered in Foshan, China. Featuring not only a full body, but a transparent body slab, heated at 1300 degrees celcius, this crystalline is not only dense, but semi transluscent in form. Features a collection of 200 different engineered stones

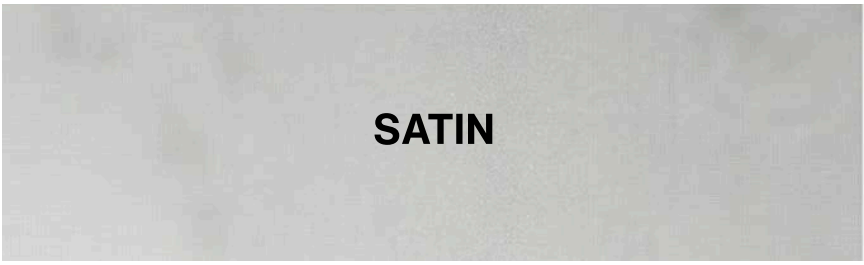

Mediterraneo by Bonotti is an italian engineered stone collection that captures the colors, textures, and warmth of the Mediterranean landscape. Combining advanced technology with Italian artistry, it recreates the elegance of natural stone while offering strength, versatility, and consistency. Durable yet refined, Mediterraneo brings cultural heritage into modern design, allowing spaces to carry both beauty and performance.

Textures

This year, our collection of finishes celebrates the many ways stone can express itself. From the high-gloss brilliance of **Polished** to the soft matte of **Honed**, each finish reveals a different character. **Satin** brings a subtle, velvety sheen, while **Flamed** creates a rugged, textured surface born of fire — ideal for bold, tactile designs.

Some finishes embrace history and touch. **Anticato** evokes the charm of aged stone, carrying warmth and timeless appeal. **Sandblast** achieves a fine, grainy texture that softens light while enhancing grip. **Leather** offers a unique, organic feel, its surface smooth yet subtly textured, inviting both sight and touch.

Others highlight artistry in detail. **Stripe** and **Flute** introduce linear patterns that add rhythm and movement, transforming stone into a dynamic surface. **Native**, on the other hand, celebrates raw authenticity, keeping stone closest to its natural essence. Together, these ten finishes form a palette of possibilities — each one a different way for stone to tell its story.

Custom Works

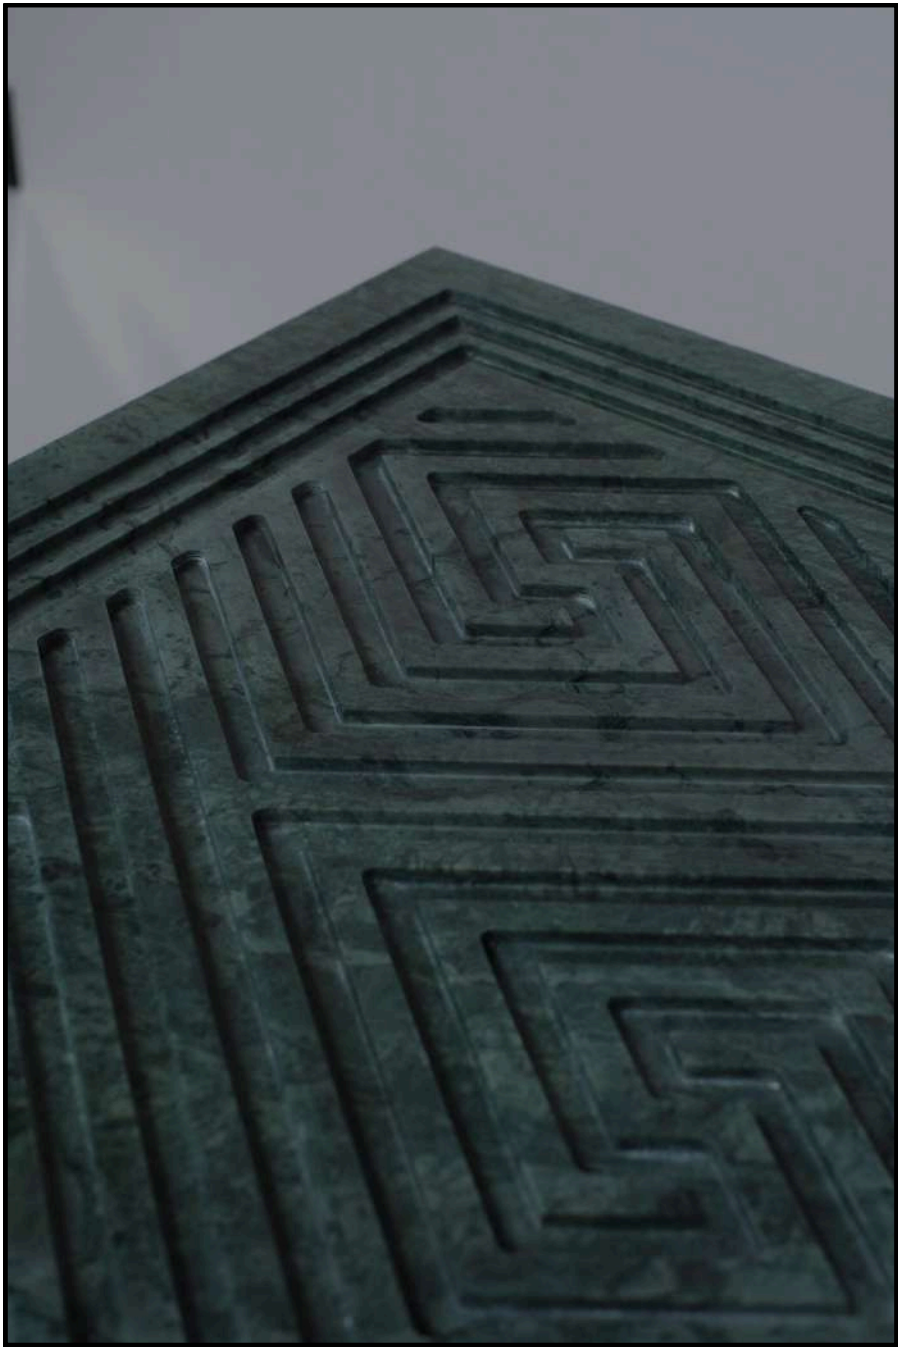

Our custom works represent the highest expression of craftsmanship, merging advanced fabrication techniques with the natural beauty of stone. From **bended lights** made of marble—where thin, precisely engineered slabs are curved to glow with soft translucency—to bespoke sculptural elements, every piece is designed as a functional artwork. These illuminated forms showcase the poetic potential of stone, revealing its internal veining and crystalline depth when brought to life with integrated lighting.

We craft **custom tabletops**, **furniture**, and architectural features, each shaped to fit the proportions and personality of its environment. Whether it's a seamless monolithic table carved from a single block, or a multi-material piece combining wood, metal, and rare stone, the result is always a distinctive statement rooted in meticulous detailing and refined aesthetics.

Using state-of-the-art CNC technology, we are able to create **patterns** with virtually unlimited possibilities—from intricate geometric motifs to fluid, organic contours. This level of precision opens the door to fully personalized wall panels, decorative screens, sculptural surfaces, and even art installations that carry the rhythm and identity of the space.

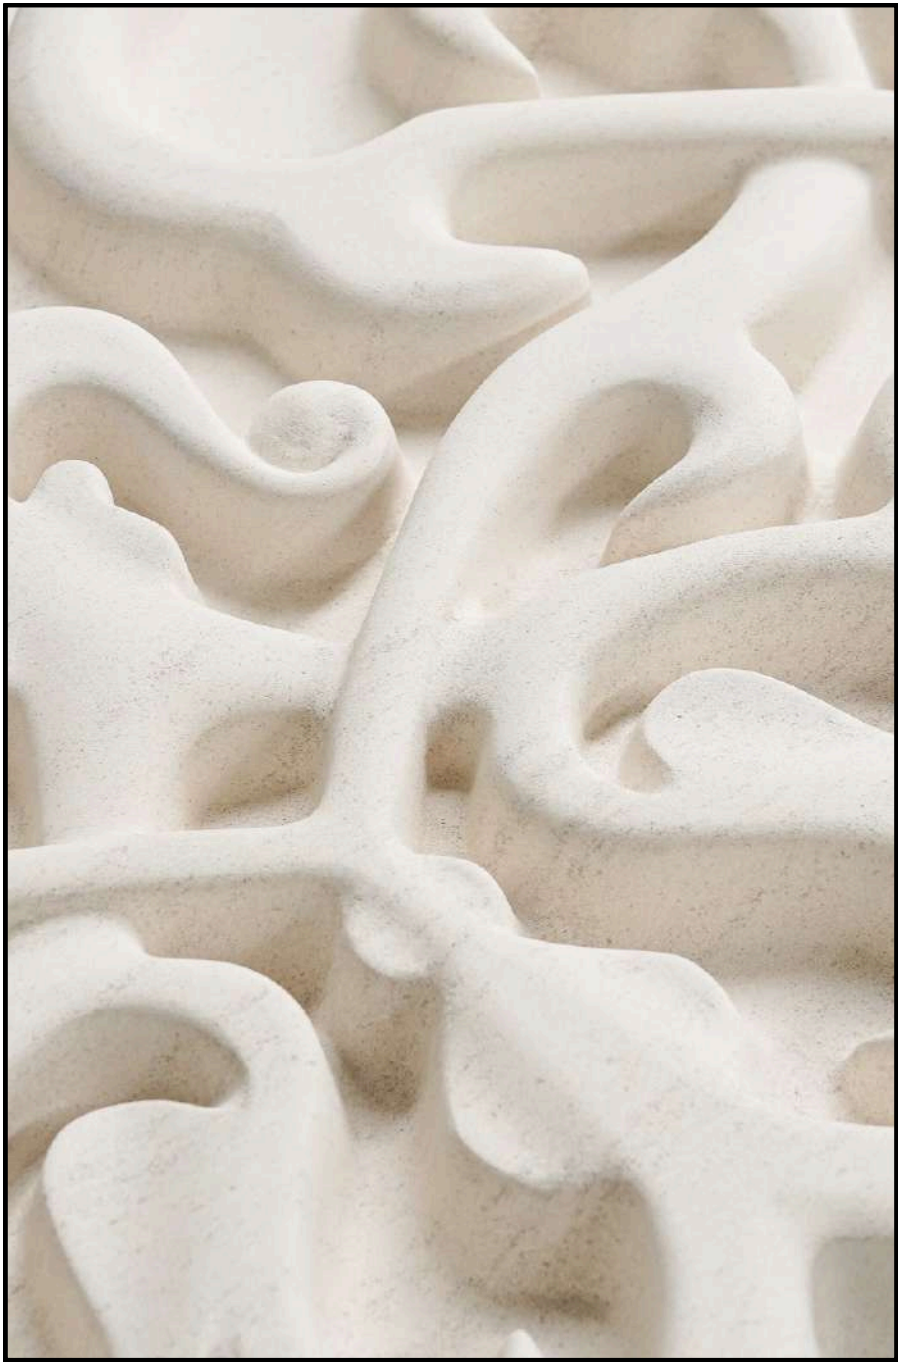

Our expertise extends to **custom sinks**, **basins**, wall patterns, and tailored lighting accents, all engineered with the same level of craftsmanship. Whether minimalist or dramatic, these pieces blend form and function, adding depth and character to bathrooms, spas, lobbies, and private residences. And for clients seeking the rarest finishing touches, we design custom lights and trinkets in stone, metal, and glass—unique accessories that complete a space with distinction.

Together, these custom works illustrate our commitment to transforming natural stone into contemporary art, giving each project a level of personalization and luxury that cannot be replicated.

2026 Projects

C3

Casa Amarilla

Casa Amarilla presents a refined blend of Mediterranean ease and contemporary sophistication, creating a home that feels both serene and distinctly elevated. The transition from the poolside terrace into the interior is fluid and inviting, with large steel doors, creamy façades, and lush greenery setting a tranquil tone. Soft curves and warm light define the atmosphere, giving the architecture a timeless character that remains fresh and modern.

Inside, the bar and dining area become the project's sculptural centerpiece. The rhythm of arches, warm natural wood, and carefully layered lighting establishes a sense of balance and intimacy. Natural light washes across the carved surfaces, highlighting the refined geometry of the space and deepening the richness of its materials. A palette of warm neutrals, brushed brass accents, and subtle contrasts reinforces the home's calm yet luxurious personality.

Material choices anchor the design experience. Outdoors, the polished **Luna Breccia** introduces a gentle interplay of beige and taupe, its surface catching the light and reflecting the calming palette of the terrace. This stone enhances the poolside atmosphere with a quiet, luminous elegance. Inside, the bar is clad in **Arabescato Violet**, whose bold veining—ranging from deep violet to soft cream and gold—creates a striking visual impact. In real life, the stone reads even more dramatic than the photographs suggest, with its polished finish intensifying the depth and movement of the pattern across the countertop, bar front, and full-height arched backsplash.

Together, these elements shape Casa Amarilla into a warm, sculptural, and inviting residence where stone, light, and form work in harmony. By pairing the serene presence of Luna Breccia outdoors with the expressive artistry of Arabescato Violet inside, the project achieves a distinctive identity.

Toilet

H List

H List, located in the vibrant SCBD district of Jakarta, embodies a striking fusion of nightlife energy and futuristic design. The atmosphere is immersive from the moment you enter—moody, sculptural, and cinematic. The bar takes center stage as a glowing architectural statement, setting the tone for a space defined by dramatic lighting, sharp geometry, and a bold contemporary sensibility.

The visual composition relies on angular forms, reflective surfaces, and an ever-shifting interplay of neon light. Multicolored illumination activates the entire bar, refracting through the crystalline surfaces and washing the lounge area in atmospheric blues and violets. Behind the bar, geometric shelving becomes a luminous backdrop, presenting bottles like curated art pieces. The palette of charcoals, silvers, and saturated tones heightens the sense of depth and movement within the room.

A key element of the project is the use of **Onyx Ice Age**, fabricated with a specialty **8mm** laminated technique for both the bar and tables. Its translucency allows internal veining and crystalline textures to glow when lit from below, revealing soft icy whites, pale greys, and fractured patterns that become even more dramatic under neon lighting. Importantly, every stone component was fully prefabricated in our factory, allowing us to execute the complex geometric forms with precision before installation. This method ensured seamless assembly on-site and guaranteed the sculpted onyx volumes matched the design intent exactly.

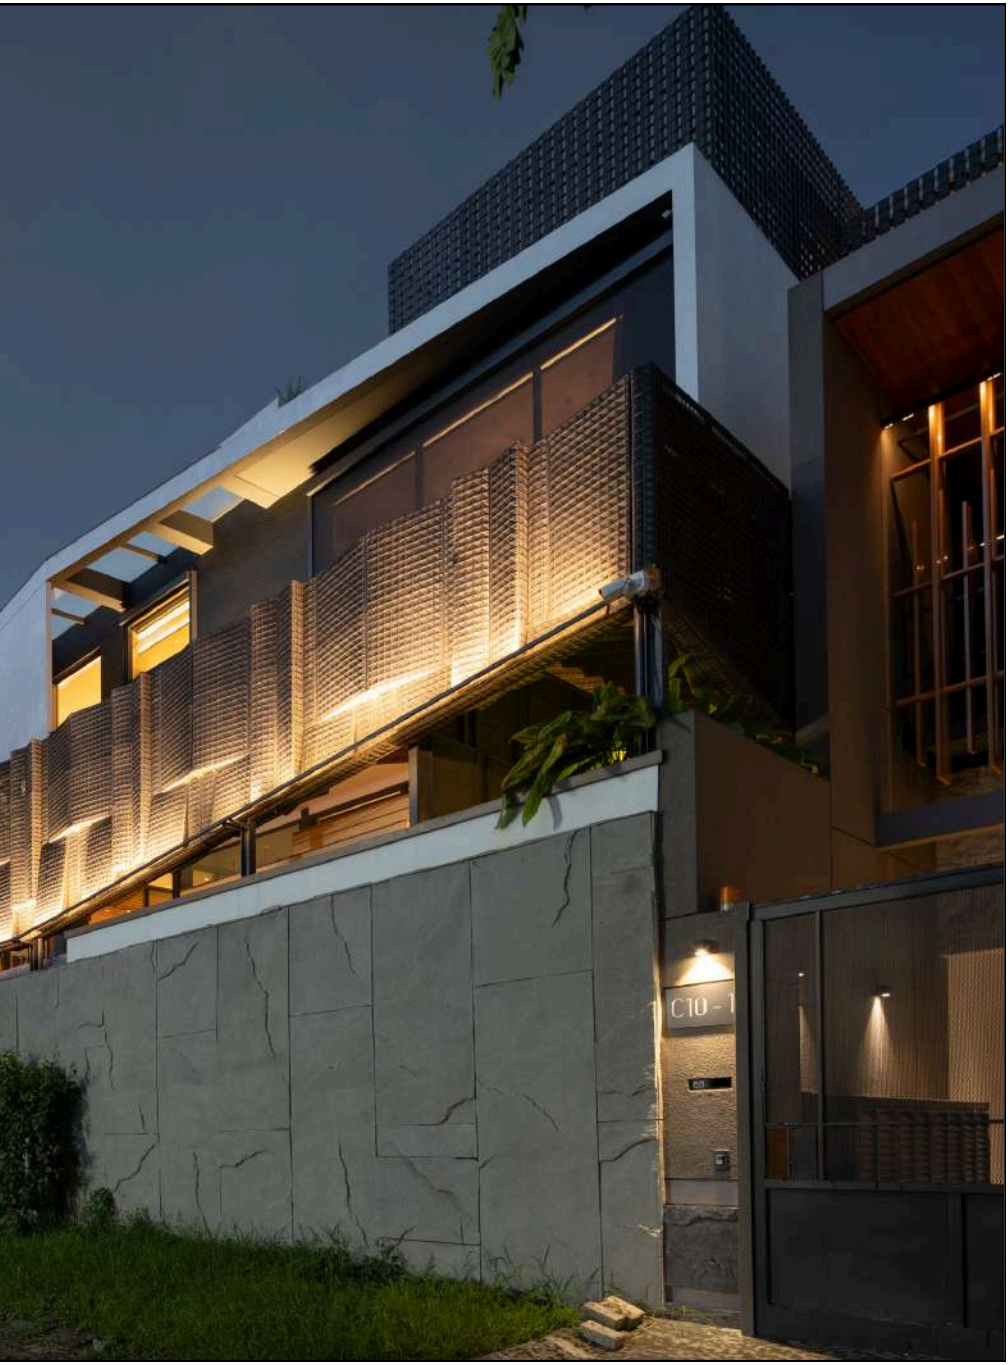

Together, these elements transform H List into an immersive, atmospheric destination where stone, light, and fabrication artistry merge into a singular experience. The prefabricated Onyx Ice Age pieces—combined with the dynamic neon lighting—give the project its unmistakable character.

C10 - 1

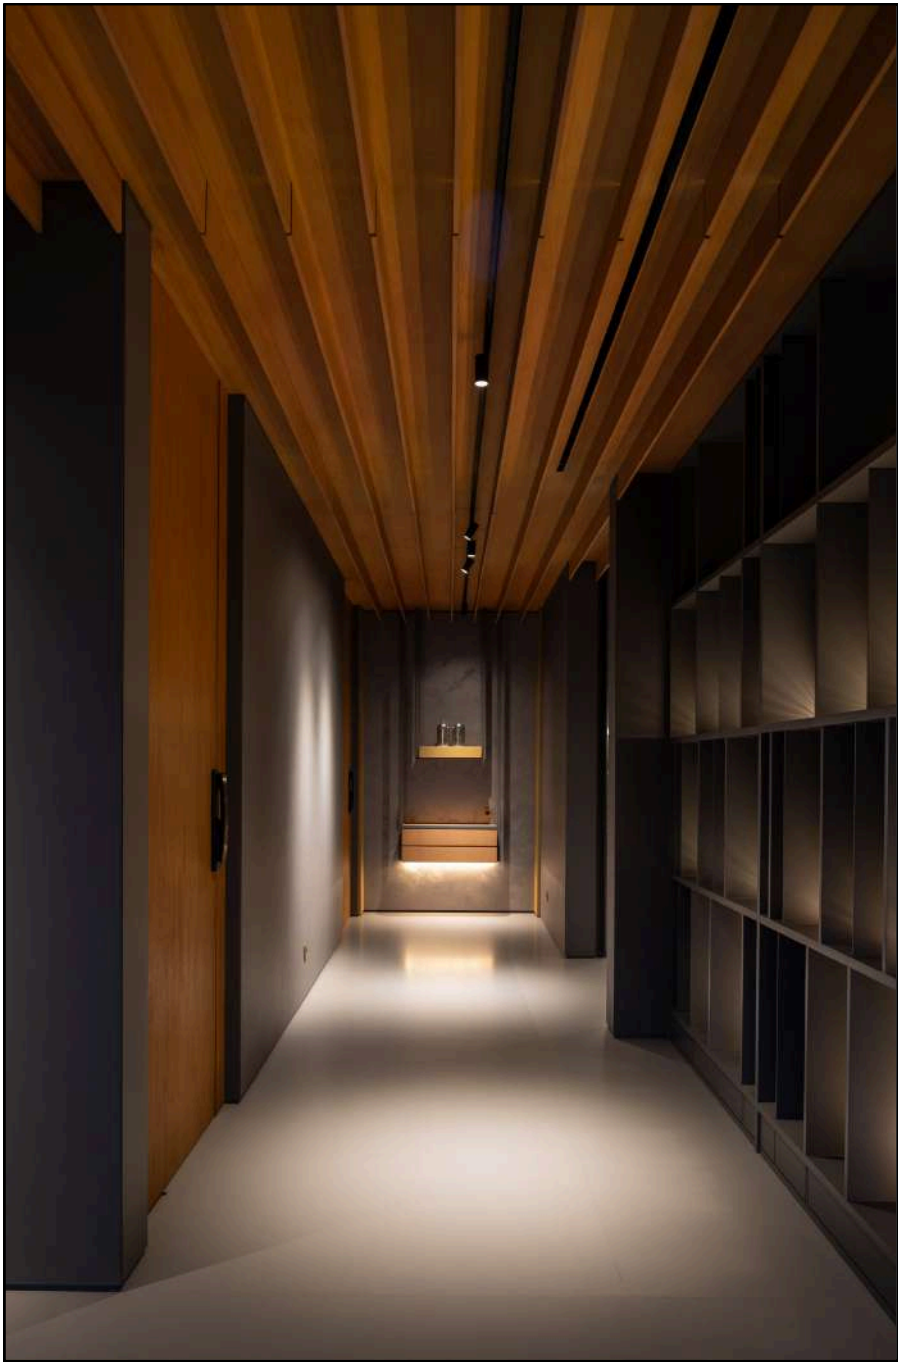

YD House

YD House is crafted as a study in contemporary calm and sculptural precision, where architecture, light, and materiality work together to create a quietly luxurious atmosphere. The home moves between warm and cool tones with ease—wooden ceiling fins, deep grey wall planes, and soft, diffused lighting build a serene narrative from the moment you step inside. Every corridor and room feels intentional, with volumes shaped to guide movement and enhance a sense of grounded sophistication.

The exterior façade continues this narrative with bold, modern lines softened by warm lighting and textured surfaces. At night, the home glows with a refined presence—light grazing across architectural screens and the stone perimeter walls, revealing layers of shadow and rhythm. Inside, the mood shifts toward intimate refinement: darker palettes, clean silhouettes, and selective highlights create a sense of privacy and composed elegance. In the bathroom, the interplay of warm illumination, reflective surfaces, and sculptural fixtures adds a distinctly luxurious spa-like aura.

Materiality plays a defining role throughout the project. Outdoors, **Pietra Serena Sierra** lays the foundation with its cool grey tone and subtle movement, giving the landscape a grounded and architectural feel. For the main interior floors, **Lapitec Grigio Cemento** brings a smooth, modern surface with gentle, cement-like tonality that enhances the home's calm minimalism. In the bathroom, the dramatic presence of **Onyx Africa** takes center stage—its warm caramel, honey, and ivory veining forming a rich, swirling pattern that transforms the space into a statement of natural opulence. The polished finish heightens its depth, making the stone glow under the warm ambient lighting.With each material thoughtfully placed, YD House becomes a residence defined by contrast and harmony—cool modernity meeting warm stone expression, minimalism enriched by texture and light.

7 Hartley Grove

7 Hartley Grove in Singapore unfolds as an opulent, highly bespoke residence where craftsmanship, artistry, and rare materials come together to create a truly singular environment. The atmosphere is luminous and refined—soft, diffused light moves across sculptural surfaces, gently curved forms, and meticulously executed detailing. Spacious rooms flow into one another with ease, each anchored by a palette of creams, golds, and warm natural tones that elevate the home's contemporary elegance.

Throughout the interior, composition and movement are expressed through sweeping lines and decorative precision. The waterjet inlay floors introduce an exquisite rhythm underfoot, forming intricate motifs that frame each space like custom artwork. Curving architectural elements—most notably the sculpted columns clad in bended **Palisandro**—lend a softness and fluidity that complement the home's expansive volumes. Over the dining area, a suspended installation of sculptural petals and metallic leaves creates a poetic canopy, enhancing the sense of theatrical luxury.

Material selection is at the heart of the project's identity. The main floors in **Onyx Linea** bring a soft, luminous character, with linear veining that glows under the ambient lighting. The primary bathroom showcases the richness of bended **Golden Spider**, its gold-threaded veining wrapping the room like a refined, radiant envelope. Other bathrooms, though not shown here, feature equally prestigious stones including **Statuario** and **Sodalite Blue**, underscoring the home's uncompromising material palette. Additionally, the kitchen island—also not pictured—is crafted from Amazonite from Brazil, an exceptionally rare stone prized for its vivid turquoise tones and crystalline depth, adding another layer of rarity and artistry to the residence. Together, these materials shape 7 Hartley Grove into a sculptural, ethereal expression of ultra-luxury living.

FLOOR
MAY BE WET

Ion Orchard Renovation

The renovation of **ION Orchard** unfolds as a masterclass in retail luxury, where walls of **8mm laminated Stella Cream** create a truly singular environment. The atmosphere is one of refined softness—a luminous backdrop where subtle textures and creamy tones flow with ease across the mall's expansive interior. It is a material choice that feels both sculptural and weightless, elevating the contemporary elegance of Singapore's premier retail destination into a realm of ethereal light.

This sense of composition was meticulously cultivated in Surabaya, where every panel was born from an uncompromising commitment to craftsmanship. Working with the precision of a bespoke jeweler, the fabrication team translated intricate field measurements into a series of perfectly executed elements. By pre-cutting and vein-matching every piece within the studio, they ensured that the natural rhythm of the Stella Cream would wrap the walls with decorative precision, as if the stone had been tailored specifically for the architecture it inhabits.

The journey from the Surabaya workshop to the heart of Orchard Road was defined by a quiet, unwavering accuracy. Each segment of the laminated stone arrived in Singapore as a pristine expression of technical artistry, mirroring the exactitude of the original architectural drawings. There was a poetic simplicity to the arrival; because the work was perfected at the source, the pieces fell into place with absolute fluidity, requiring no on-site adjustments—only the final unveiling of a flawless, cross-border collaboration.

The final result is a radiant envelope that underscores the power of precision in ultra-luxury design. Achieving such a perfect fit within one of the world's most iconic shopping environments speaks to a level of mastery that transcends traditional stonework. Together, the delicate Stella Cream and the meticulous Surabaya craftsmanship shape the new ION Orchard into a sculptural, high-fashion destination, where every surface reflects a singular vision of excellence.
